

What Is Claimed Is:

1. A method for adapting visual contents to user's low-vision impairment symptom and presentation preferences,  
5 comprising the steps of:

receiving visual contents;

accepting information about the user's low-vision impairment symptom and presentation preferences and describing the information in a standardized description  
10 structure;

adapting the received visual contents through a method selected according to the information; and

displaying the adapted visual contents to the user.

15 2. The method as claimed in claim 1, wherein the information about the user's low-vision impairment symptom includes at least one of information of indicating whether or not left and right eyes of the user are blind, left and right visions of the user, and the kind of the low-vision  
20 impairment symptom of the user.

3. The method as claimed in claim 1, wherein the information about the user's low-vision impairment symptom includes a textual or numerical descriptor that describes a  
25 degree of the user's low-vision impairment symptom.

4. The method as claimed in claim 1, wherein the information about the user's low-vision impairment symptom includes at least one selected from the group consisting of  
30 a degree of "loss of fine detail", a degree of "lack of

contrast", a degree of "light sensitivity", a degree of "need of light", a degree of "loss of peripheral vision field", a degree of "loss of central vision field" and a degree of "loss of half field of vision".

5

5. The method as claimed in claim 1, wherein the information about the user's presentation preferences includes user's contents resource priority preference.

10

6. The method as claimed in claim 5, wherein the contents resource priority preference has a modality priority preference and a genre priority preference.

15

7. The method as claimed in claim 5, wherein the contents resource priority preference has an object priority preference.

20

8. The method as claimed in claim 1, wherein the step of adapting the visual contents is carried out through at least one technique selected according to the user information from contrast control, sharpness control, brightness control, glare reduction, adjustment of image size, presentation priority and modality transformation.

25

9. A method for adapting visual contents to user's low-vision impairment symptom, comprising the steps of:

receiving visual contents;

accepting information about the user's low-vision impairment symptom and describing the information in a standardized description structure;

30

adapting the received visual contents according to the user information having the standardized description structure; and

displaying the adapted visual contents to the user.

5

10. The method as claimed in claim 9, wherein the information about the user's low-vision impairment symptom includes at least one selected from the group consisting of a degree of "loss of fine detail", a degree of "lack of contrast", a degree of "light sensitivity", a degree of "need of light", a degree of "loss of peripheral vision field", a degree of "loss of central vision field" and a degree of "loss of half field of vision".

10

15

11. A method for adapting visual contents to user's presentation preferences, comprising the steps of:

receiving visual contents;

accepting information about the user's presentation preferences and describing the information in a standardized description structure;

20

adapting the received visual contents according to the user information having the standardized description structure; and

displaying the adapted visual contents to the user.

25

12. The method as claimed in claim 11, wherein the information about user's presentation preferences includes user's contents resource priority preference.

30

13. The method as claimed in claim 12, wherein the

contents resource priority preference has a modality  
priority preference and a genre priority preference.

14. A system for adapting visual contents to user's  
5 low-vision impairment symptom and presentation preferences,  
comprising:

means for receiving visual contents;

means for accepting information about the user's low-  
vision impairment symptom and presentation preferences and  
10 storing the information in a standardized description  
structure;

means for adapting the received visual contents  
through a method selected according to the information; and

means for displaying the adapted visual contents to  
15 the user.

15. The system as claimed in claim 14, wherein the  
information about the user's low-vision impairment symptom  
includes at least one selected from the group consisting of  
20 a degree of "loss of fine detail", a degree of "lack of  
contrast", a degree of "light sensitivity", a degree of  
"need of light", a degree of "loss of peripheral vision  
field", a degree of "loss of central vision field" and a  
degree of "loss of half field of vision".

25

16. The system as claimed in claim 14, wherein the  
information about user's presentation preferences includes  
a user's contents resource priority preference.

30

17. The system as claimed in claim 14, wherein the

means for adapting the visual contents carries out at least one technique selected according to the user information from contrast control, sharpness control, brightness control, glare reduction, adjustment of image size, presentation priority and modality transformation.
